Pneumatic and Hydraulic

Category: Pneumatic, Hydraulic & Fluid Mechanics · Model reference: MZM-6001

SPECIFICATIONS

DESCRIPTION:
PNEUMATIC TRAINER AND PLC
Training Kits are made of various pneumatic and electro-pneumatic components assembled into training board with flexi-clamp. Component can be mounted horizontally & vertically anywhere along the slots. The mounting plates with the assembled components are design to be mounting into training board enable instructors to assemble and demonstrate pneumatics circuits and students to assemble and test circuits they have designed. Inclination of Mounting Board can be easily adjusted by loosening the locking screw. All pneumatics component are fitted with quick fittings and all electrical components are fit tied with input and output sockets to enable assembly of circuits to conducted quickly and conveniently
EXPERIMENTAL CAPABILITIES

- Demonstrate the process of Pneumatic Trainer from these activation students are able to learn how to operate the Pneumatic System.
- Educate students the important of Pneumatic to save life, property and environment.
- Able to determine the actual course of activation from the control panel and safety procedure to be taken.

Features:
- Simple layout with easy to operate features.
- Simple operation.
- Self-contained - required only electrical supply (220V / 240V)
- User friendly - easy to operate.
- Used standard devices and components which are readily available at any outlet specialized in fire protection system.
